DOCENTS

Cityscape

Grade 4
Cut Paper

Los Altos School District • 201 Covington Road • Los Altos • CA • 94024 • 650.947.1195
www.losaltosartdocents.org

Last Revised: December 2022

CITYSCAPE

Length: 75 minutes

Number of docents: 1

Purpose:

- To teach students about architecture: the art and science of designing a building.
- To teach different architectural styles throughout history and show the progression of architecture when new materials become available.
- To act as an architect by creating a building facade for a cityscape.

Academic Support Geometry: Draw and identify lines and angles, and classify shapes by properties of their lines and angles.

Visual Arts Standards:

- Collaboratively set goals and create artwork that is meaningful and has purpose to the makers. (4.VA:Cr1.2)
- Explore and invent art-making techniques and approaches. (4.VA:Cr2.1)
- When making works of art, utilize and care for materials, tools, and equipment in a manner that prevents danger to oneself and others. (4.VA:Cr2.2)
- Document, describe, and represent regional constructed environments. (4.VA:Cr2.3)
- Explore how past, present, and emerging technologies have impacted the preservation and presentation of artwork. (4.VA:Pr4)
- Analyze components in visual imagery that convey messages. (4.VA:Re7.2)
- Interpret art by referring to contextual information and analyzing relevant subject matter, characteristics of form, and use of media. (4.VA:Re8)
- Create works of art that reflect community cultural traditions. (4.VA:Cn10)

Unit Contains: Supply bag and portfolio

Materials docent will bring:

Cray Pas

Glue sticks

Scissors

6"x 9" construction paper for each student (variety of colors)

Materials teacher will provide per student:

One 3'x4 'piece of colored butcher paper for class mural (black or blue look great)

Scissors

Pencil

Color pencils

Felt tip markers

Featured works:

Cityscape of Los Altos, 1988

Jan Meyers (local artist)

Blueprints: elevations and facades

Architecture Example Boards:

Ancient Architecture: Macchu Pichu, Pyramids, Fortress by Havasupai Indians, Persepolis

Eastern and Middle Eastern Architecture: St. Basil's Church, Heian Jingu Shrine, The Alhambra, Taj Mahal

Greek and Greek Revival Architecture: Parthenon Temple, Nymphaeum, Lincoln Memorial, Pool House for the Neptune Pool (San Simeon, CA)

Column Order

Roman and Romanesque Architecture: Coliseum, Pont du Gard Aqueducts, Tower of Pisa, Main Quadrangle at Stanford University

Gothic and Gothic Revival Architecture: Notre Dame Cathedral, Cathedral at Chartres, Bourges Cathedral, Moss Cottage

Industrial Revolution: Golden Gate Bridge, Eiffel Tower, Pyramid (entry to Louvre)

Modern and Contemporary: Guggenheim Museum, Notre Dame Ronchamp, Disney Concert Hall, Sydney Opera House

California Architecture: El Campanil, Mills College; Gamble House; First Church of Christ, Science; Tea House, Wynton; Merrill Hall Asilomar, Monterey Peninsula

Vocabulary:

Elevation or Façade: the face of a building; shows all sides of the building

Fenestration: openings that let in natural light / air: doors, windows, skylights

Architectural/Building Function: the purpose of a building or structure

Architectural Style: the way a building looks: a set of characteristics & features that make a building or structure notable and/or historically identifiable

Room Setup:

- Write name of lesson and your name on the board
- Write Vocabulary words on the board
- Display the Cityscape poster on the board (lesson outline)
- Display docent samples of cityscape elevations on the board
- Display Architectural Image Boards around the room for Gallery Walk
- Set out 6"x 9" construction papers on a side/back table
- Draw roadway on the colored butcher paper; add "City" name (i.e. City of Smith, Smith Village, Smith-Town) and the date (if you have an assistant they can do this while you do the introduction)
- Have students sit on the carpet in front of the room (if space available)

INTRODUCTION (25-30 minutes total)

What kind of art piece do you think we are going to make today?

Today you are going to be an architect! **Who is an architect?** An architect is the person who designs a building. The architect must have a sense of style and beauty. **What is Architecture?** Architecture is the art and science of designing a building. It is 3-dimensional art. The architect Julia Morgan regarded architecture as “the fine arts of mechanics.” The first thing an architect will ask a client, is “what will your building be used for?”

Today our lesson will be in 2 parts: first we will be learning about architectural functions and elements of style, and gathering inspiration for our own architectural designs. Then each of you will design and draw your own piece of architecture!

Building Functions: (5 minutes)

What is Building Function? (the purpose of a building or structure) **What are some examples of each of these building functions?**

- **Residential:** (where people live): houses, apartments, town homes
- **Commercial:** (where goods or services are sold) (think about buildings in downtown Los Altos: ice cream shop, bank, pharmacy, grocery store) hospitals, theatres, museums, offices
- **Industrial:** factories: (local ones include: See’s chocolate, Tesla, Benicia oil refinery)
- **Educational:** (where you go to learn) schools and dance studios, library
- **Religious:** churches, shrines, temples, and mosques
- **Monuments:** a structure built to honor an important person. The Lincoln Memorial was built to honor President Abraham Lincoln.

Gallery Walk: (may pair posters for comparison) (5 minutes)

Tell students to analyze the architectural features, details they see, and compare and contrast the features they see on the poster pairs. Students may also want to find a favorite building or detail that may inspire their own building design.

Elements of Style: (review posters as group) (12 minutes)

What is Architectural Style? (the way a building looks: a set of characteristics & features that make a building or structure notable and/or historically identifiable)

What do you see that are the prevalent/repeated architectural features?

Ancient Architecture

- Very old structures, not currently vs.

used for original purposes

- Locally found materials (stone) vs.
- Can see they are ancient because materials are degrading/weathering

Industrial Revolution

- New(er), currently used structures

- Man-made materials (steel & glass)
- Easily recognizable, iconic (widely recognized & well-known) structures

Classical Order of Columns

- Organized from simple to most ornate/decorative

Classical Greek & Greek Revival Architecture

- Columns allow for airflow & more sunlight to interior. Vertical lines give sense of strength
- Pediments (triangle shape)
- Historians say the buildings were brightly painted!
- Use of stone

Eastern & Middle Eastern Architecture

- Domes called “onion domes”
- Elaborate (fancy) roofs
- Highly decorated with tile
- Use of brightly colored paint for style & to protect wood structure
- Use of large roof overhangs to protect from the rain

Roman & Romanesque Architecture

- Round-top arches, stone & brick vs.
- Arches allowed for bigger & wider openings and can carry more structural load so structures could get bigger

Modern & Contemporary

- Invention of reinforced concrete (with steel inside) allowed for:
- Free forms & expressive curves
- Metal cladding
- Building function not as easy to discern (Opera house, museum, chapel, music hall)

Gothic & Neo-Gothic Architecture

- Pointed arches, stone
- Flying buttresses (exterior supports),
- Towers
- Rose window
- Many famous Gothic bldgs are religious

California Architects

- Use local materials like stone, redwood
- Many architects influenced by nature which led to the Bay Region Tradition
- Promote indoor/outdoor living
- Open floor plans with large windows & doors to let in views of nature & fresh air
- Note: Bell tower is 1st use of reinforced concrete in the west!

Elements of a Facade: (3 minutes)

Show the Blueprint. **An architect drew this on a computer and printed it out. This shows an Elevation.** Tell students the definition of **Facade** (the face of a building). Note that an **elevation drawing** is a 2-d representation of a face of a building. **This is the type of drawing you will be doing today!** Ask students to point out elements they see and to brainstorm other architectural elements that would be shown in a building elevation drawing:

Windows, doors, skylights (**fenestration!** - lets in light & air), chimney, steps, railings, columns, arches, domes, flying buttresses, tiles, roof tiles, roof shingles, copings (edges of roofs), pediments (triangle shaped element on top of columns), porches, signs, address numbers, materials (brick, stone, stucco, wood siding, glass, steel)

Cityscape Inspiration: (5 minutes)

Show Jan Meyer painting of Los Altos from 1988.

Do you recognize the location? Los Altos

We are going to create a Cityscape artwork as a group, similar to this painting.

Note how the artist shows only the fronts of the buildings (mostly).

Be an Architect! (hands-on project) (40-45 minutes)

Tell students to think about the function & elements of style of their building. Tell them that they can orient the paper vertically or horizontally. Dismiss them from the carpet area to choose a piece of colored paper and go to their desks.

Rules: Name on front, have fun & be as creative as possible!

Process:

1. Sketch in pencil
2. Outline with dark magic marker
3. Color with colored pencils or markers
4. Cut it out
5. Bring facade to docent who will glue it on the butcher paper

Students may add details to the Cityscape after most elevations are glued down: clouds, mountains, birds, trees & shrubs.

Different ways to give feedback to children doing art:

- Describe what you see in their work--be specific
- Comment on their effort and involvement with the project
- Comment on the art elements in the work: color, line, shape, space, texture
- Ask questions about the work--try to engage in discussion with the student rather than just giving praise
- Refer to the child as the artist of this piece
- Wait to respond if asked by the student "what do you think?"
 - Take a moment to look at the work and smile. That often gives the student an opportunity to start talking about it spontaneously.
- Try not to interrupt a child who is engrossed in their art. This might cause them to lose track of what they're doing.
- If a child is not finishing on time, give tips to work more quickly or show new techniques to add to their creation.

BACKGROUND

Jan Meyer is a local Los Altos artist. She is inspired by memories of New England and the color & vitality of California. Ms. Meyer graduated from San Jose State University and attended the Parson school of Design. She has painted many murals on businesses and homes throughout the Bay Area.

ANCIENT ARCHITECTURE:

Machu Picchu is a pre-Columbian Inca site located 8,000 ft above sea level. It is situated on a mountain ridge above the Urubamba Valley in Peru, which is 50 miles northwest of Cuzco and through which the Urubamba River flows. Often referred to as "*The Lost City of the Incas*", Machu Picchu is one of the most familiar symbols of the Inca Empire. It was built around 1460 AD but was abandoned as an official site for the Inca rulers a hundred years later, at the time of the Spanish conquest of the Inca Empire. Since it was not plundered by the Spanish when they conquered the Incas, it is especially important as a cultural site and is considered a sacred place. Machu Picchu was built in the classical Inca style, with polished dry-stone walls. Its primary buildings are the *Intihuatana*, the *Temple of the Sun*, and the *Room of the Three Windows*. These are located in what is known by archaeologists as the *Sacred District* of Machu Picchu.

Persepolis: was the ceremonial capital of the Persian Empire during the Achaemenid dynasty. Persepolis is situated 70 km northeast of the modern city of Shiraz in the Fars Province of modern Iran. The earliest remains of Persepolis date from around 515 BC. To the ancient Persians, the city was known as Pārsa, which means "The City of Persians". Persepolis is the Greek interpretation of the name "Persian city".

The **native fortress** occupied by Havasupai Indians is built into a canyon wall. The Havasupai Indians have lived on their land for over 800 years. Their city is located in the bottom of the Grand Canyon in Arizona. They are considered nomads, as they used to spend the summer and spring months in the canyon farming, while spending the winter and fall months on the plateau hunting.

The **Egyptian pyramids** are ancient pyramid shaped masonry structures located in Egypt. There are over 100 pyramids in Egypt. Most were built as tombs for the country's Pharaohs and their consorts during the Old and Middle Kingdom periods. The step pyramid of Djoser and its surrounding complex were designed by the architect Imhotep, and are generally considered to be the world's oldest monumental structures constructed of dressed masonry. The best-known Egyptian pyramids are those found at Giza, on the outskirts of Cairo. The Pyramid of Khufu at Giza is the largest Egyptian pyramid. It is the only one of the Seven Wonders of the Ancient World still in existence.

EASTERN & MIDDLE EASTERN ARCHITECTURE:

Cathedral of Saint Basil the Blessed, *Saint Basil's Cathedral* - is a multi-tented church on the Red Square in Moscow that also features distinctive onion domes. It is very often mistaken by Westerners for the Kremlin, whose buildings are in fact situated across the square from the cathedral. Arguably the most recognized building in Russia, it is an international symbol for the nation and for the city of Moscow. The cathedral was commissioned by Ivan IV (also known as *Ivan the Terrible*) in Moscow, and built from

1555 to 1561. In 1588 Tsar Fedor Ivanovich had a chapel added on the eastern side above the grave of Basil Fool for Christ, a Russian Orthodox saint after whom the cathedral was popularly named.

The **Heian Shrine -Heian Jingū** is a Shinto shrine located in Kyoto, Japan. The main building, or *shaden*, is designed to imitate the Kyoto Imperial Palace on a three-fourth scale. The Heian Jingū was built in 1895 for the 1100th anniversary of the establishment of Heiankyō (the old name of Kyoto). The shrine is dedicated to Emperor Kanmu and Emperor Kōmei. The Heian Jingū hosts the Jidai Matsuri, one of the three most important festivals of Kyoto.

Alhambra, Granada Andalusia, Spain, mid-11th century Spain UNESCO site
The Moorish emir Mohammed ben Al-Ahmar, among the last Muslim Rulers in Spain, renovated a fort built in 889 CE, for his palace. Moorish poets described the Alhambra as “a pearl set in emeralds,” alluding to the colors of the buildings in the complex and its setting near a forest.

The **Taj Mahal** is a mausoleum located in Agra, India, built by Mughal Emperor Shah Jahan in memory of his favorite wife, Mumtaz Mahal. The Taj Mahal (also "the Taj") is considered the finest example of Mughal architecture, a style that combines elements from Persian, Ottoman, Indian, and Islamic architectural styles. While the white domed marble mausoleum is its most familiar component, the Taj Mahal is actually an integrated complex of structures. Building began around 1632 and was completed around 1653, and employed thousands of artisans and craftsmen. The Persian architect, Ustad Ahmad Lahauri is generally considered to be the principal designer of the Taj Mahal.

GREEK & GREEK REVIVAL ARCHITECTURE:

The **Parthenon** is a temple of the Greek goddess Athena, built in the 5th century BC on the Athenian Acropolis in Athens, Greece. It is the most important surviving building of Classical Greece, generally considered to be the culmination of the development of the Doric order. Its decorative sculptures are considered one of the high points of Greek art. The Parthenon is regarded as an enduring symbol of ancient Greece and of Athenian democracy, and one of the world's greatest cultural monuments.

Nymphaeum Jerash, Jordan 191 CE

Nympaeums refer to a monument consecrated to nymphs. They were built in grottos. The original façade of the structure was marble and contained a fountain.

Lincoln Memorial, dedicated 1922, on the National Register of Historic Places since 1966. Henry Bacon was commissioned to design the memorial in honor of our sixteenth president, Abraham Lincoln. The monument is in the form of a Greek Doric temple. The interior holds a large statue of a seated Lincoln and plaques containing portions of his two most famous speeches: the Gettysburg Address and his Second Inaugural Speech. The monument has been the site of two memorable events in our history. On Easter Sunday in 1939, Marian Anderson, the world renowned contralto, gave a free concert on its steps before 75,000 people. She had been denied the use of the 4000 seat Constitution Hall, managed by the Daughters of the American Revolution, who had a “whites only”

policy. The first lady, Eleanor Roosevelt, resigned her membership in the DAR in protests. Mrs. Roosevelt, with the approval of the president, arranged for the Department of the Interior to issue an invitation to Marion Anderson to sing at the memorial. That led to a national awareness of discriminatory policies still in effect. A book for children has been written about that event; When Marian Sang, by Pam Munoz Ryan. Martin Luther King, Jr. gave his “I have a dream” speech on those steps in 1963 as part of the March on Washington for jobs and freedom.

Pool House at the Neptune Pool, San Simeon, CA 1924-34

“No part of San Simeon bears more traces of Hearst’s and Morgan’s ‘architectural selves’ than the outdoor Neptune Pool.” Julia Morgan assembled fragments of a Roman temple, designed in the style of a Greek temple, and combined them with modern pieces to form the structure. She added colonnades on either side to form the central feature of the Neptune Pool.

THE CLASSICAL ORDERS OF COLUMNS:

The columns are basic elements in Greek architecture. There are 5 types of columns. Doric, Ionic, and Corinthian are most commonly used in Classical and in Greek Revival architecture.

ROMAN & ROMANESQUE ARCHITECTURE:

The **Coliseum** or Roman Coliseum is an elliptical amphitheater in the center of the city of Rome, Italy, the largest ever built in the Roman Empire. Construction started between 70 and 72 AD under the emperor Vespasian and was completed in 80 AD under Titus, with further modifications being made during Domitian's reign (81–96).

The **Pont du Gard** is an aqueduct in the South of France constructed by the Roman Empire, and located in Vers-Pont-du-Gard near Remoulins. Built on three levels, the *Pont* is 49 m high, and the longest level is 275 m (300 yards) long. On its first level, it carries a road and at the top of the third level, a water conduit.

The **Tower of Pisa**, is the campanile, or freestanding bell tower, of the cathedral of the Italian city of Pisa. It is situated behind the cathedral and is the third oldest structure in Pisa's Piazza del Duomo (*Cathedral Square*) after the cathedral and the baptistry. Although intended to stand vertically, the tower began leaning soon after the onset of construction in 1173 due to a poorly laid foundation and loose substrate that has allowed the foundation to shift direction.

Main Quadrangle, Stanford University, 1887-1906

Leland and Jane Stanford wanted an architecture that was distinctly Californian in its character and had hired Henry Hobson Richardson, known for his Richardson Romanesque style, to design the original buildings, though he died in 1887 before work had begun. Charles Allerton Coolidge, a member of his firm, created the design with assistance from Leland and Jane. Richardson’s style was adapted to the Stanford’s preference for the California Mission style with its red tile roofs and roman arches typical of the Romanesque structures in the south of France and Spain. Stonecutters and

sculptors from Italy and the United States cut and set sandstone from the Graystone Quarry in San Jose. The capitals on the columns vary in their design.

GOTHIC & GOTHIC REVIVAL ARCHITECTURE:

Notre Dame de Paris ('Our Lady of Paris' in French) is a Gothic cathedral on the eastern half of the Île de la Cité in the fourth arrondissement of Paris, France. Notre Dame de Paris is widely considered one of the finest examples of French Gothic architecture. Notre Dame de Paris was one of the first Gothic cathedrals, and its construction spanned the Gothic period. Its sculptures and stained glass show the heavy influence of naturalism, unlike that of earlier Romanesque architecture. Notre Dame de Paris was among the first buildings in the world to use the flying buttress [arched exterior supports].

Cathedral at Chartres, Chartres, France 1194-1250, UNESCO site

The Cathedral at Chartres is considered one of the greatest achievements in the history of architecture and is unique among French cathedrals in that its original design and furnishings are nearly intact from its inception. Among the original features are the stained glass windows, which have been described as self-illuminating walls. The first of four earlier churches was built in the fourth century at Chartres, which was the most popular destination for medieval pilgrims in France. The current cathedral was designed by unknown architects who created the then unheard of large windows: the clerestory windows and the large rose windows.

Bourges Cathedral, Bourges, France, completed in 1230, UNESCO site

Both of the cathedrals at Chartres and at Bourges, begun at about the same time, included many innovations in architecture, including the shaft rib construction used by the unknown architects at Bourges. The major difference between the two structures are the window-walls at Chartres and the spaciousness within Bourges. The flying buttresses of Bourges are unusually steep. Although the arches are slender and look delicate, their double design created strength and aesthetic value.

Moss Cottage, Oakland CA, 1864

The J. Mora Moss House is an example of the use of elements of Gothic architecture in a domestic structure. Carpenter Gothic style wood-framed houses and small churches became common in North America in the late nineteenth century (during the Victorian period) when carpenters used Gothic details including pointed-arch windows, steep gables, and towers. S. H. Williams designed Moss Cottage, a 5,500 square foot wooden structure for Mr. and Mrs. Moss for their retirement home. The City of Oakland purchased Moss Cottage in 1912 from the Moss estate. It is now used by the city's parks and recreation department.

INDUSTRIAL REVOLUTION:

The **Golden Gate Bridge** is a suspension bridge spanning the Golden Gate, the opening of the San Francisco Bay onto the Pacific Ocean. As part of both U.S. Route 101 and State Route 1, it connects the city of San Francisco on the northern tip of the San Francisco Peninsula to Marin County. The Golden Gate Bridge was the longest suspension bridge span in the world when it was completed in 1937, and has become an

internationally recognized symbol of San Francisco and California. Since its completion, the span length has been surpassed by eight other bridges. It still has the second longest suspension bridge main span in the United States, after the Verrazano-Narrows Bridge in New York City.

The **Eiffel Tower** is an iron tower built on the *Champ de Mars* beside the Seine River in Paris. The tower has become a global icon of France and is one of the most recognizable structures in the world. Named after its designer, engineer Gustave Eiffel, the Eiffel Tower is the tallest building in Paris. Including the 24 m (79 ft) antenna, the structure is 324 m (1,063 ft) high, which is equivalent to about 81 floors in a conventional building.

The **Louvre Pyramid** is a large glass and metal pyramid, surrounded by three smaller ones, in the courtyard of the Louvre Museum in Paris, France. The large pyramid serves as the main entrance to the museum. Completed in 1989, it has become a landmark for the city of Paris. Commissioned by then French president François Mitterrand in 1984, it was designed by the architect I. M. Pei.

MODERN & CONTEMPORARY ARCHITECTURE:

The **Solomon R. Guggenheim Museum**, which opened on October 21, 1959. Designed by Frank Lloyd Wright, the museum—which is often called simply *The Guggenheim*—is home to a renowned permanent collection of Impressionist, Post-Impressionist, early Modern, and contemporary art, and also features special exhibitions throughout the year.

The chapel of **Notre Dame du Haut** in Ronchamp, France completed in 1954 is by the late French/Swiss architect Le Corbusier. The structure is built mostly of concrete and stone, which was a remnant of the original chapel built on the hilltop site destroyed during World War II. Some have described Ronchamp as the first Post-Modern building.

Walt Disney Concert Hall, Los Angeles, California, 1999-2003

The Walt Disney Concert Hall, home of the Los Angeles Philharmonic Orchestra and the Los Angeles Master Chorale, was designed by the California architect Frank Gehry. The exterior of the Walt Disney Concert Hall is stainless steel with a matte finish. The 2010 World Architecture Survey cited his works as among the most important works in contemporary architecture. Many of Gehry's buildings, including his Santa Monica home and the Guggenheim Museum in Bilbao, Spain, have become attractions for tourists to visit and admire. Gehry worked with the Los Angeles Philharmonic on the Hollywood Bowl between 1970 and 1982. He was selected as the architect for the Disney Concert Hall in 1988.

The **Sydney Opera House** is located in Sydney, Australia on Bennelong Point in Sydney Harbour. It was conceived and largely built by Danish architect Jørn Utzon. The Sydney Opera House is an expressionist modern design, with a series of large precast concrete 'shells', each taken from a hemisphere of the same radius, forming the roofs of the structure, set on a monumental podium. The building covers 4.5 acres of land, and is 605 ft long and 388 ft wide at its widest point. It is supported on 588 concrete piers sunk up to 27 yards below sea level.

CALIFORNIA ARCHITECTURE:

El Campanil, Mills College, Oakland, 1904 Mission Revival style. The first bell tower erected on a US campus and the first use of reinforced concrete in the west. Julia Morgan was influenced by the California missions in her design of El Campanil. She used arches and buttresses in her design. Julia Morgan, the first native California architect and the first woman to be licensed to practice in the state, was especially known for designs in harmony with their natural environment. She was sensitive to how people would inhabit the building and how the building related to its site. She was the first woman to be issued a license to practice architecture by the State of California in 1904. When she died in 1957, her body of work exceeded 800 buildings, 21 of which are either designated as National Historic Landmarks or are on the National Register of Historic Places. Morgan's first major work was awarded to her by Susan Mills, the President of Mills College, who wanted to further the work of women. Her reputation was enhanced when it survived the 1906 earthquake.

Merrill Hall, Asilomar, Pacific Grove, 1924 by Julia Morgan Bay Region Tradition, California State Monument The hall is above the ocean, with large windows to let in light and views of nature. It was designed as a chapel and a gathering place.

Tea House, 1935 Wynton, Hearst Estate, by Julia Morgan Bay Region Tradition. The Tea House is on a river and was designed to look as if it was part of a Bavarian village.

First Church of Christ, Scientist, Berkeley, 1909-1910 by Bernard Maybeck Bay Region Tradition. Bernard Maybeck, the son of German immigrants, was born in NYC in 1872. His architectural styles included Mission, Mission Revival, Gothic 14 Revival, Beaux Arts, and the Bay Region Tradition of the Arts and Crafts Movement. The First Church of Christ, Scientist, considered Maybeck's masterpiece and widely regarded as a masterpiece of American architecture. The interior includes characteristics of seven different styles: Gothic, Romanesque, Byzantine, Mediterranean, Arts and Crafts, Japanese, and Modern Industrial. A large window frames Gothic style tracery in cast concrete; fluted concrete piers have Romanesque capitals. Its overall composition is in the Bay Region Tradition.

Gamble House, Pasadena, 1908 Arts and Crafts, National Historic Landmark since 1977 The Arts and Crafts movement began in England in the mid 19th century as a reaction to the Industrial Revolution. Its adherents felt a reverence for nature; a desire for the simple life; and believed in the union of art with craft. This movement was a major influence throughout California, especially in Northern California in the late 19th and early 20th century. Charles Sumner Greene (1868-1957) and Henry Mather Greene (1870-1954) were brothers from Ohio and St. Louis, who became well known for their bungalows in California. They both studied woodworking and metalworking. Their parents asked Charles and Henry to join them in Pasadena in 1893. They lived and worked in Pasadena until closing their joint practice in 1922, when Charles moved with his family to Carmel. The Gambles turned their home over to the City of Pasadena and the University of Southern California. It became the site of Dr. Brown's house in the movie, "Back to the Future." Greene and Greene designed all of the furnishings and were influenced by traditional Japanese design and construction. Note the sleeping porch on the right for nights when it was too hot to sleep indoors. Their designs for pillars included the

corbeled braces used in traditional Japanese temples and lights in the style of traditional lanterns. Whatever influences they derived from other cultures, their father's concerns as a homeopathic doctor, for sunlight and freely circulating fresh air, influenced the design of the basic structure.

Revision History

Revision Date	Docent Name	Comments
2005	Kimia Yadegar, Depali Kapatkar, Alka Goel, Gloria Dralla	Developed
March 2009		Revised
March 2012	Kimberly Dickerson	Reformatted for continuity
February 2013	Curriculum Committee	Added suggestions for docents to give feedback to children
May 2013	Kimberly Dickerson	Updated supply list for teacher to include 3'x4' butcher paper instead of us bringing in mat board
October 2014	Mary Pat Gaspich	Some examples were changed, CA architect board added to provide better connection for students to local architecture
March 2016	Michelle Lee	Definition of vernacular architecture better defined
December 2018	Kimberly Dickerson	Floor plan and elevation poster changed
May 2019	Kimberly Dickerson	New VAPA Standards added
September 2022	Michelle Lee	Simplified discussion, added lesson outline poster
